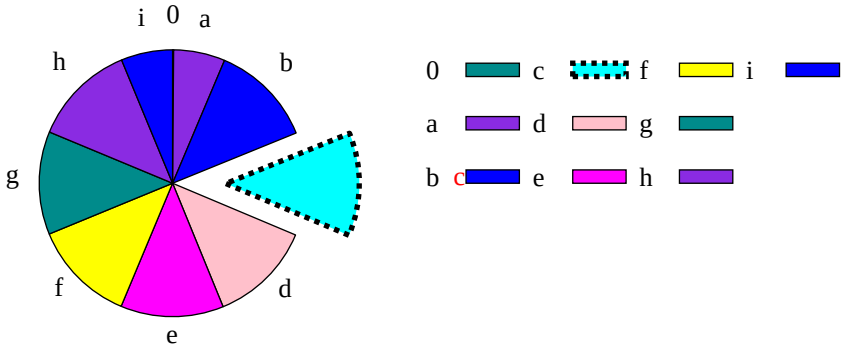
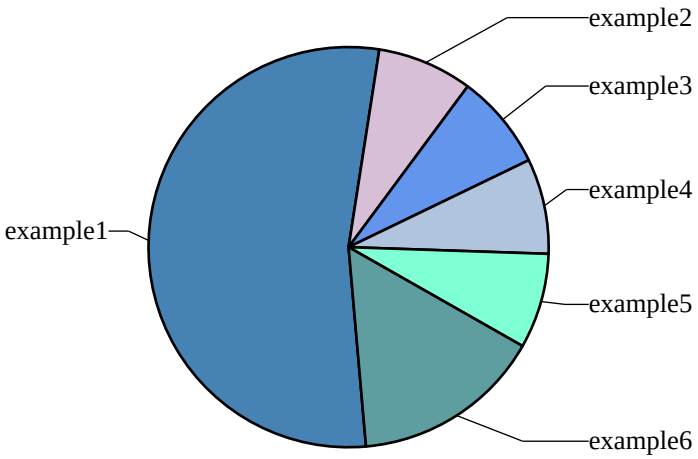
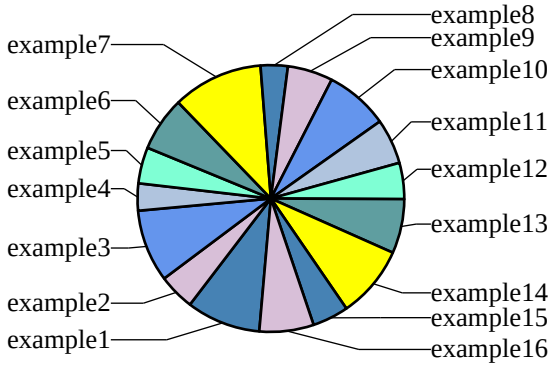
Pie



Side Labelled Pie

Here are two examples of side labelled pies.



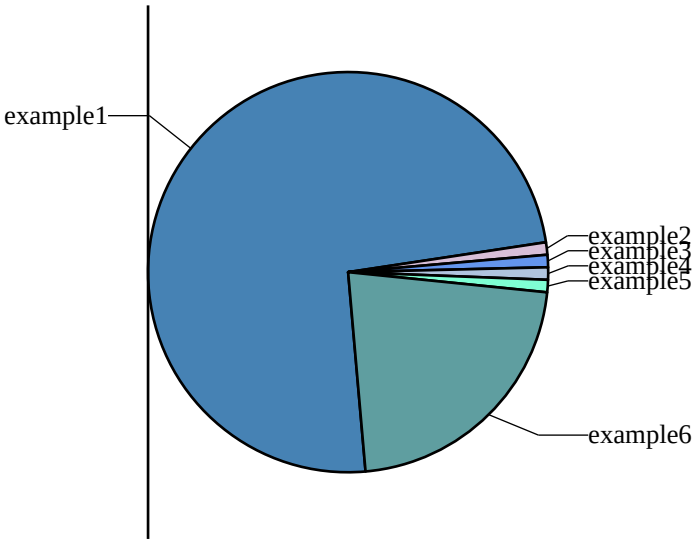


Moving the pie

Here is a pie that has pie.x = 0 and is moved sideways in order to make space for the labels.

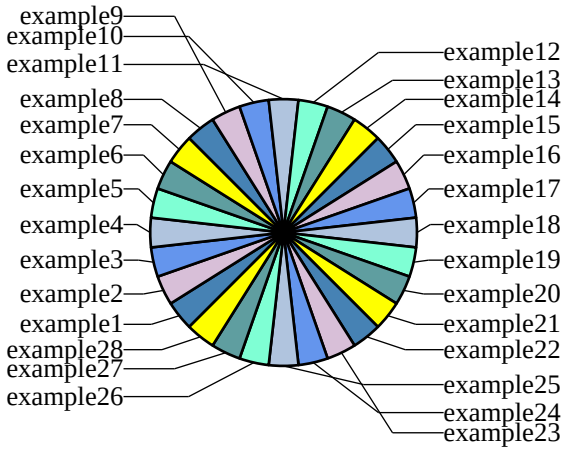
The line represents x = 0

This has not been implemented and is on line 863 in piecharts.py



Case with overlapping pointers

If there are many slices then the pointer labels can end up overlapping as shown below.



Case with overlapping labels

Labels overlap if they do not belong to adjacent pie slices.
