

First, a test of how tables align their content...

Generated with version 2.7

In release 2.3, cells with plain text positioned their text differently to cells with Paragraphs using the same font. Hopefully now they are back on the same baseline

plain text	plain text	shortpara	plain text	long para
Text	more text	Is this para level?	Back to text	Short para again
Text	more text	Is this level?	This is plain text with line breaks to compare against the para on right	Long paragraph we expect to wrap over several lines accurately

Now we make a table with just one cell containing a string...note how the text sits low

One cell of plain text

Now we make a table with just one cell containing a para...should be same position. Note that the overall bounding box is an approximation and lies - it always did.

One cell containing a paragraph. ÄÉ]

Paragraphs jumped up post 2.1. Ideally they should align the same.

Now for all the tests we had before. See also the much longer test_platypus_tables_2.pdf, which for reasons unknown was split into a separate file generated by the same script

	North	South	East	West
Quarter 1	100	200	300	400
Quarter 2	100	400	600	800
Total	300	600	900	1,200

	North	South	East	West
Quarter 1	100	200	300	400
Quarter 2	100	400	600	800
Total	300	600	900	1,200

	North	South	East	West
Quarter 1	100	200	300	400
Quarter 2	100	400	600	800
Total	300	600	900	1,200

	North	South	East	West
--	-------	-------	------	------

Quarter 1	100	200	300	400
Quarter 2	100	400	600	800
Total	300	600	900	1,200

	North	South	East	West
Quarter 1	100	200	300	400
